Application No.: 10/025,911 Docket No.: 8733.543.00

Amendment dated March 5, 2004

Response to Advisory Action dated February 25, 2004

Listing of Claims:

1. (Previously Presented) A lamp apparatus for a liquid crystal display, comprising:

a lamp capable of using a discharge of an external voltage applied to an electrode of

the lamp to generate light;

a wire to deliver the external voltage;

a connector for electrically connecting the electrode of the lamp to the wire, the

connector directly contacting the electrode of the lamp and a portion of the wire; and

unifying means for integrally forming the lamp and the wire electrically connected to

each other via the connector.

2. (Original) The lamp apparatus according to claim 2, further comprising a unifying

means for integrally forming the power terminal of the lamp and the wire electrically

connected to each other via the connector.

3. (Original) The lamp apparatus according to claim 1, wherein the connector

includes:

a first curved wing for directly contacting the electrode of the lamp; and

a second curved wing for directly contacting a portion of the wire.

Application No.: 10/025,911 Docket No.: 8733.543.00

Amendment dated March 5, 2004

Response to Advisory Action dated February 25, 2004

4. (Original) The lamp apparatus according to claim 2, wherein the unifying means

is an injection molded product for unifying an end of the lamp, the electrode of the lamp, the

connector, and the wire.

5. (Original) The lamp apparatus according to claim 4, wherein a material of the

injection molded product is selected from any one of the group comprising plastic and

silicon.

6. (Original) The lamp apparatus according to claim 3, wherein the first curved wing

is at least partially surrounding the electrode of the lamp and the second curved wing is at

least partially surrounding the portion of the wire.

Claims 7-12 (Canceled)

13. (New) A apparatus, comprising:

a device having an electrode;

a wire;

a connector including electrically conductive material, wherein the connector directly

contacts the electrode and the wire.

Amendment dated March 5, 2004

Response to Advisory Action dated February 25, 2004

14. (New) The apparatus of claim 8, further including a holder that protects a portion

of the device and a portion of the wire from external impacts.

15. (New) The apparatus of claim 9, wherein the holding includes injection molded

material.

16. (New) The apparatus of claim 8, wherein the connector includes:

a first curved portion directly contacting the electrode; and

a second curved portion directly contacting the wire.

17. (New) The apparatus of claim 11, wherein the first curved portion at least partially

surrounds the electrode and the second curved portion at least partially surrounds a portion of

the wire.
